

OHIO VACCINE PREPAREDNESS OFFICE WEEKLY UPDATE

PANDEMIC VACCINE NEWS & UPDATES THIS WEEK

- **Phase 1B announced** - On Dec. 23, Governor Mike DeWine announced the next broad category of people eligible to be vaccinated during Phase 1B. The goals of Phase 1B are to save lives and to have K-12 students back in school full time by March 1. This phase, which is estimated to begin in mid-January, specifically includes:
 - Ohioans age 65 and older.
 - People with severe congenital, developmental, or early-onset medical disorders that make them particularly vulnerable. This includes cerebral palsy; spina bifida; congenital heart disease; type 1 diabetes; inherited metabolic disorders; severe neurological disorders including epilepsy; severe genetic disorders including Down Syndrome, Fragile X, Prader Willi Syndrome, and Turner Syndrome; severe lung disease including cystic fibrosis and severe asthma; sickle cell anemia; and alpha and beta thalassemia.
 - Employees in all schools that want to go back, or to remain, educating in person.The vaccine distribution plan for future priority populations is still under development and will be shared publicly as soon as it is finalized.
- **Don't let unused COVID-19 vaccine go to waste** - When faced with the possibility that a vial of vaccine will be wasted because no one from the priority group is present for vaccination, such as at the end of a vaccination clinic or session when the remaining vial must be either used or discarded, the CDC has clarified that **no vaccine should ever be wasted**. If you administer vaccinations under these circumstances:
 - The vaccine administration must be reported in ImpactSIIS, including race and ethnicity data, within 24 hours.
 - Target population/occupation data does NOT need to be reported for vaccinated individuals who are not in a Phase 1A priority population.
 - The provider must include these vaccinated individuals in follow-up plans for administering second doses.
- **Moderna vaccine storage and handling guidance** - Caution should be used to handle and transport the vaccine with care. Please review this [Moderna vaccine storage and handling guide](#) to ensure storage and temperature requirements are met.
- **Second dose guidance** - Should you hold back vaccine for the second dose? What should be included on vaccination record cards? [Detailed guidance on second dose administration is available now](#).
- **New COVID-19 maps** - Governor DeWine shared [two new maps](#) for tracking how severe the spread of COVID-19 is in Ohio. The first map measures cases per capita over time. The first map is based on the list of high-incidence counties and indicates the levels of spread in a county. The second map shows each Hospital Preparedness Region and what percent of the overall ICU patient population are COVID-19 patients. Both maps will be updated weekly on Thursdays at coronavirus.ohio.gov.
- **Training available for collection of target population/occupation** - [Training](#) for properly collecting target population/occupation data and reporting for ImpactSIIS is [available now](#). As a reminder, providers will need to collect that data using a [paper checklist](#) and then add the information in [ImpactSIIS](#) within 24 hours [using one of three processes](#).

TALKING POINTS

The most trusted voices when it comes to information about COVID-19 are an individual's personal physician, medical experts, and emergency room doctors, followed by public health officials.

- Ohio is prepared to distribute **safe** and **effective** COVID-19 vaccines statewide. We have two clear goals: To save lives and slow the spread of the virus.
- The COVID-19 vaccine development process included several steps comparable with those used to develop earlier vaccines, such as the flu or measles vaccine. The FDA and independent medical experts have ensured that every detail of these vaccines are thoroughly and rigorously evaluated.
- Initially, there will be a limited number of vaccines available, and Ohio is committed to making the vaccine widely available, for those who want to receive it, as quickly as possible as shipments arrive.
- In the early stages of COVID-19 vaccine distribution, doses will be available in limited supply for specific critical populations as a part of phased approach. As supply increases, COVID-19 vaccines will be available to all Ohioans who choose to be vaccinated.
- The vaccine has been shown to decrease the severity of illness in people who catch this virus. Having a significant portion of Ohioans vaccinated will help us prevent serious hospitalizations and death and will allow Ohioans to get closer to a sense of normalcy.
- Using all the tools available to help prevent the spread of the virus continues to be critical until a substantial number of Ohioans can be vaccinated. Continuing to wear masks and social distance will reduce your chance of being exposed to or spreading the virus. Proper prevention measures coupled with the vaccine will provide the best protection from COVID-19.
- An Emergency Use Authorization (EUA) authorizes use of an unapproved medical product, or unapproved use of an approved medical product, for use during a public health emergency if the benefits of its use outweigh any known or potential risks. Both Pfizer-BioNTech and Moderna's COVID-19 vaccines have been granted EUA following rigorous review. In the past, EUAs have been issued for products, devices, and drugs related to Ebola, H1N1, Zika, and others. The EUAs are valid until the pandemic is over, the FDA revokes the EUAs, or the products are approved for traditional licensure by the FDA. The FDA closely monitors each vaccine for safety after the EUA is issued. Drug manufacturers are encouraged to obtain traditional FDA licensed vaccine approval as soon as possible.
- Side effects are minimal. The most common side effects include fatigue, headache, soreness or redness at the injection site, and muscle or joint pain, and should not prevent you from getting a vaccine that can prevent you from catching or spreading this deadly virus.

SOCIAL MEDIA POST IDEAS

- In the early vaccination phase, supply will be limited. As the number of available doses increases, COVID-19 vaccines will be available to all Ohioans who choose to be vaccinated. See more about Ohio's phased approach  Learn more  <https://coronavirus.ohio.gov/vaccine> *[Suggested graphic: Ohio's Phased Approach]*
- FACT: Side effects of #COVID19 vaccines are minimal, and show your body is creating an immune response. Common side effects like fatigue, headache, soreness/redness at the injection site, and muscle/joint pain, should not prevent you from getting a life-saving vaccine.
- FACT: #COVID19 vaccines weren't rushed and have been thoroughly vetted through a rigorous safety assessment involving independent medical professionals. See more myths vs. facts at <https://bit.ly/OHVaccineMyths>.
- FACT: No serious safety concerns have been observed for the #COVID19 vaccines being administered in the U.S. Learn more at <https://bit.ly/OHVaccineMyths>.
- Right now, vaccine supply is still limited. Until a substantial number of Ohioans can be vaccinated, proper prevention, like wearing masks & social distancing, will reduce your chance of being exposed to or spreading the virus during the pandemic. Don't let up. <https://coronavirus.ohio.gov/vaccine>
