COVID-19 Viral (NAAT) Laboratory 14-Day Test Positivity Rates, by US County

| COVID-19 VIral (NAAT) Laboratory 14-Day Test | | | | | | | | | |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|--|--|
| | Counties with test percent positivity <5.0% or with <20 tests in past 14 days: Green; test percent positivity | | | | | | | | |
| Test Positivity Classification: | ≥5.0% to ≤10.0% or with <500 tests and <2000 tests/100k and >10% positivity over 14 days: Yellow; >10.0% | | | | | | | | |
| | and not meeting the criteria for "Green" or "Yellow": Red. Gray represents no data reported. Test positivity is | | | | | | | | |
| | rounded to the nearest tenth of a percent before classifying. | | | | | | | | |
| Percent Positive and Tests in prior 14 days: | Data from August 4-August 17 | | | | | | | | |
| Data Sources: | Testing data: HHS Unified Testing Dataset; Population data: 2019 Census | | | | | | | | |
| | The data presented represent viral COVID-19 laboratory diagnostic and screening test (nucleic acid | | | | | | | | |
| | amplification test, NAAT) results and exclude antibody and antigen tests. COVID-19 Electronic Lab Reporting | | | | | | | | |
| | (CELR) state health department-reported data are used to describe county-level viral COVID-19 laboratory test | | | | | | | | |
| | (NAAT) result totals when information is available on patients' county of residence or healthcare providers' | | | | | | | | |
| Documentation: | practice location. HHS Protect laboratory data (provided directly to Federal Government from public health | | | | | | | | |
| | labs, hospital labs, and commercial labs) are used otherwise. Some states did not report on certain days, which | | | | | | | | |
| | may affect the total number of tests resulted and positivity rate values. Total viral (NAAT) laboratory tests are | | | | | | | | |
| | the number of tests performed, not the number of individuals tested. Viral (NAAT) laboratory test positivity | | | | | | | | |
| | rate is the number of positive tests divided by the total number of tests performed and resulted. Resulted tests | | | | | | | | |
| | are assigned to a timeframe based on this hierarchy of test-related dates: 1. test date; 2. result date; 3. | | | | | | | | |
| | specimen received date; 4. specimen collection date. Resulted tests are assigned to a county based on a | | | | | | | | |
| | hierarchy of test-related locations: 1. patient residency; 2. provider facility location; 3. ordering facility location; | | | | | | | | |
| | 4. performing organization location. | | | | | | | | |
| | | | | | | | | | |
| | During the week of Sept 14, 2020, the following updates were made to the county percent test positivity | | | | | | | | |
| Note: | characterization methodology. In order to use a greater amount of data to calculate percent test positivity and | | | | | | | | |
| | improve the stability of values, the indicator was expanded to include 14 days of data instead of 7 days. | | | | | | | | |
| | Further, because there are instances where counties with high test positivity rates may reflect low testing | | | | | | | | |
| | levels rather than high levels of viral transmission, additional criteria were added to re-assign counties with low | | | | | | | | |
| | Test | | | | | | | | |
