## The Telehealth Solution Serving Individuals With Intellectual and Developmental Disabilities

### Why StationMD?

The Ohio Department of Developmental Disabilities has partnered with StationMD to provide telehealth services. StationMD delivers superior medical care to people with intellectual and developmental disabilities (I/DD) in their home settings employing telehealth. Our physicians have a special commitment to caring for people with I/DD and have dedicated training in this area. Using our telehealth solution, people with I/DD have access to our specially-trained ER doctors from the comfort of their home.

At StationMD, we have successfully reduced the costs associated with unnecessary ER transfers and hospital stays. These savings impact payers, residential facilities, providers, and family members.

### Providing High-Quality Care in a Stable Environment

The trauma of transfer and exposure to infection aside, the ER can be particularly frightening and disorienting for individuals with I/DD. The daily routine of meals, activities, sleeping, and medications is disrupted as well.

### How It Works

### What's Needed

A telehealth visit with a StationMD physician is initiated by making one simple phone call. A member of our staff will then help you connect to the physician for the telehealth visit. A Wi-Fi or cellular internet connection is required. The telehealth visit can be done on our StationMD mobile app on most iOS or Android devices or we can also provide an icon for most Windows devices to connect with the physician. Any iOS, Android or Windows device you use should have a camera built in or ability to add an external camera. It is also helpful, but not required, to have the ability to provide a temperature, blood pressure, pulse and oxygen saturation level. Equipment can be purchased through StationMD if needed.
