

Ergonomics and safety for extended-care facilities

Extended-care facility workers often place more emphasis on patient safety issues than their own. Such circumstances have led to these employees sustaining frequent, and often severe, workplace injuries. This course will provide the elements of an effective safety and health process—focusing on management support, employee involvement, and the recognition, evaluation and control of workplace hazards.

You will learn:

- Strategies and tools for developing/enhancing your organization's safety and ergonomics management systems and reducing workplace accidents.
- OSHA compliance issues relevant to extended-care facilities and resources for ensuring effective implementation.
- Strategies and techniques for implementing ergonomic control measures to reduce strain and sprain injuries.
- About resources for ongoing assistance and support.
