# **Training and Education**

# Skilled Nursing Facilities, Residential Care Facilities (Assisted Living) & Intermediate Care Facilities for Individual with **Intellectual Disabilities**

With the ever-changing regulations and standards in the healthcare industry, staff training and education is critical for the overall success of the facility and to provide quality service. Employees should be properly trained so that they can successfully accomplish the job requirements and effectively communicate the facility's standards and procedures. Additionally, facilities are required to train staff in certain areas in order to be compliant with State and Federal regulations, which includes training on HIPAA, Residents' Rights, Abuse/Neglect, and various OSHA requirements, just to name a few.

#### **DELIVERY OF TRAINING**

- Lecture Methods Storytelling, Blackboard or whiteboard, PowerPoint Presentation, Overhead projector
- Interactive Methods Quizzes, break-out sessions, case studies, question cards, role playing, Q&A sessions
- CBT Computer Based Training Technological advancements is making computer-based training more prevalent and a viable option for organizations to train their staff.

#### COMPETENCY

Competency is an important tool to help assess and measure the ability of staff to apply knowledge and skills, reduce risk and ensure optimal patient outcomes. Competency can show limitations so that measures can be put in place to improve these limitations. This can be done through written modes and/or skills demonstration with return demonstration.

#### **DOCUMENTING ATTENDANCE**

The facility is required to maintain a written record of each formal in-service session which should include:

- Date of training
- Description of the subject matter
- Identity of the individual or individuals providing the in-service education
- List of individuals attending the session that is signed by each attendee
- Duration of the session
